

**DIGITAL SYMPOSIUM ON
AI FOR INDIA**

**AI for Healthcare and
AI in times of
COVID-19**

DAY 2 - HIGHLIGHTS - 27 AUGUST

With the rise of COVID-19, there has been an **increasing need to connect information to derive insights from the vast amounts of data generated** by the research community.

Going beyond traditional search mechanisms, integrating and synthesising information and **deriving the deeper context** requires AI and augmentation of meta-data filters.

< The key to transforming healthcare is to **make it consumer centric and proactive**. Shifting the focus to wellness and prevention is where Artificial Intelligence can play an important role. >

AI can make **healthcare more proactive** through various applications of deep learning. For example, by adapting neural networks for image classification in diabetic retinopathy or
